Project Summary Understanding the function of proteins involved in developmental signaling cascades is essential to our understanding of vertebrate development. At the zebrafish midbrain-hindbrain boundary (MHB), the migrating neural crest cells are tightly regulated by Fgf, Wnt and Nodal signaling. The vertebrate MHB is an

ideal model system to examine the molecular basis of these signaling pathways because its normal development requires highly dynamic alterations in protein activity at multiple cell-cell boundaries. These signals are integrated by the precise spatiotemporal expression of adhesion molecules that maintain a sharp transition between the epidermis and migrating neural crest. Importantly, we have shown that Fgf signaling controls the expression of multiple adhesion

molecules and has a positive feedback loop with Nodal signaling to stimulate cell adhesion. In this proposal, we will explore the role of cadherins in MHB development and the intersection of Fgf, Nodal and Wnt signaling in these interactions. For her first time in New York Fashion Week, the designer will be focused on the edgier side of streetwear with silhouettes made from "bitesized cuts and raw edges." The collection, which will be presented during London Fashion

Week, is said to be inspired by Maserati's "black and gold" design. We couldn't help but notice that her audience selection seemed to be more male-dominated. According to The Hollywood Reporter, "Empire" actor Jussie Smollett was the first to arrive at the show, accompanied by models and photographers. The Hollywood Reporter went on to say that his presence "set the tone for the evening." While models, including Aissata Kigozi, arrived just after the 6:30

pm start. Called "Moments of Freedom," the collection is said to be inspired by the cultural movement of "black lives matter," and the Black Panther Party. Her designs are said to "incorporate self-expression, homage to culture and design, and admiration for the artists who paved the way." "Moments of Freedom" is the second collection designed by Porsha Williams, following her debut "America: A Nation Under Fire," which was shown during the 2018 New York Fashion Week.

Williams' first collection was praised by Vogue editor-in-chief Anna Wintour. "I'm thrilled to introduce a new strand

We are passionate about SQL and automation. We are therefore making it simple to automate SQL and database testing. With ApexSQL Unit Test, you will be able to test your database applications with a minimum of effort, by providing the necessary SQL commands to test your code. This way, you will be able to focus on the business logic of your application, while we take care of the technical stuff. When you have developed your code, you will be able

to generate a SQL file from it, by providing one or more test classes, and ApexSQL Unit Test will build the SQL file for you, add the corresponding tests, and run them. It is even possible to automate these tasks via the CLI, making it possible to run the same SQL file via the command line for multiple databases. Additionally, ApexSQL Unit Test provides advanced test management tools. It is possible to execute the SQL file, display its results, and run the tests at any time, by using the

GUI tool we have provided. It is also possible to run a subset of the tests to filter them out for later execution. A: This is not an answer to the question, but, I'll give it a go. This is an "answer" to the comment about getting a "dependency which needs to be built first". There is a method - depending on the version of SQL Server Management Studio - that will get you going: "Select Build Dependencies". Yes it is very clunky, but it will get you going. If you want more details, you could try

the following: A: As an addendum to @bjorn-no and @TomA I would like to add that you can run the same test multiple times without having to re-run the build (so you can build/run all at once and can re-run a subset of tests later). "Select Build Dependencies" When I opened a saved test I saw something like this: From there you can use the right-click menu or tab to select the next line and get to the end of the test. As an addendum to @kevin I do not see how one can create tables using SSMS.

You need to use another tool. Create tables using SQL Server Management Studio's Create Table wizard Once
