Visual LISP and AutoLISP were incorporated into the new 2008 version of AutoCAD. The Autodesk Exchange apps program and AutoCAD's extensibility framework have allowed AutoCAD's functionality to be extended and customized through the purchase and use of AutoCAD plugins. The Extensibility Architecture for AutoCAD allows these plugins to create their own user interface, run their own code and access program services that are part of AutoCAD. However, most of the user interface is still built into AutoCAD. AutoLISP also supports JavaScript and is used in several programs such as University of Michigan's AutoCAD Carpentry. AutoLISP also supported to access the AutoCAD service. Visual LISP and AutoLISP are obsolete languages that have been replaced with.NET and ObjectARX. AutoCAD Architecture AutoCAD Architecture is Autodesk's Component Object Model (COM) programming framework used to create and customize AutoCAD and its plugins. AutoCAD Architecture allows components to be used to create applications using a graphical user interface. AutoCAD Architecture uses a tree of objects to represent how the data is structured and how it is used. Each node in the tree is a component. A component may contain other components. Components may be registered as launchable to allow them to run without AutoCAD. The component tree can be manipulated to modify its structure. ObjectAR a1d647c40b
